

Module 1: Session-4

Name: Siddheshwar Alure

Batch: 26May2026_Software_Sanket Chauhan

ANSWERS:

TASK 1:

Planning: Identify project goals, requirements, budget, and timeline.

Requirement Analysis: Gather and analyze the needs of users and stakeholders.

Design: Create the software architecture, database design, and user interface plans.

Development: Write the code and build the software application.

Testing: Check the software for bugs and ensure it meets requirements.

Deployment & Maintenance: Release the software to users and provide updates, fixes, and support.

TASK 2:

Agile is flexible, and changes can be made during development where waterfall is fixed and changes are difficult to make later.

Agile develops the project in small parts while waterfall completes the entire project step by step.

Agile involves regular customer feedback whereas waterfall has limited customer involvement after the planning stage.

TASK 3:

1. Scrum Master:

A Scrum Master helps the team follow Scrum rules, stay focused, and work well together. They guide the team by leading important meetings, solving problems, and giving support both openly and in the background.

2. Product owner:

A Product Owner makes sure the Scrum team is working on the right things to help build the product. They know what the business wants and what is happening in the market. They also talk to people

outside the team, like Product Managers and other important people, to stay updated.

3. Developers

A Developer or a Development Team is a group of people who do the main work in a Scrum sprint.. They can be engineers, designers, writers, or anyone needed to finish the tasks. They work together to plan and reach the sprint goal. Their jobs can change depending on the project, like building, designing, writing, testing, or using data.

TASK 4:

Sprint is a fixed period of time in Scrum during which the development team completes a set of tasks and delivers a working part of the product.

Typical Duration: A Sprint usually lasts 1 -4 weeks, with 2 weeks being the most common.

TASK 5:

backlog: A list of all tasks and requirements that need to be completed in the future.

To Do: Tasks that are ready to be started.

In Progress: Tasks that are currently being worked on.

Done: Tasks that have been completed successfully.
