

Session-3

Task:1

```
1 #include<stdio.h>
2 main()
3 {
4     char flipcartproduct[] = "mouse";
5     float price = 550.88;
6     double rating = 4.4;
7
8     printf("\nProduct name:%s",flipcartproduct);
9     printf("\nPrice:%.2f",price);
10    printf("\nRating:%.1f",rating);
11
12 }
```

output:

```
1 #include<stdio.h>
```

```
Product name:mouse
Price:550.88
Rating:4.4
-----
Process exited after 0.1636 seconds with return value 11
Press any key to continue . . . |
```

Task:2

```

#include<stdio.h>
main()
{
    const float GST = 18.0;
    float baseprice = 500.0;
    float finalprice;

    floatprice = baseprice + (baseprice*GST/100);

    printf("\nbase price:%2f",baseprice);
    printf("\nGST rate:%.2f%%",GST);
    printf("\nfinal price:%.2f",finalprice);
}

```

output:

```

base price:500.000000
GST rate:18.00%
final price:590.00
-----
Process exited after 0.1925 seconds with return value 19
Press any key to continue . . . |

```

Task:3

```

#include <stdio.h>

main()
{
    char playlistName[] = "My Favorites";
    int totalSongs = 50;
    float avgDuration = 3.8;

    printf("My favorite Spotify playlist is %s, it has %d songs and the average duration is %.2f\n",
           playlistName, totalSongs, avgDuration);
}

```

output:

```
My favorite Spotify playlist is My Favorites, it has 50 songs and the average song duration is 3.8 minutes.  
-----  
Process exited after 0.4078 seconds with return value 107  
Press any key to continue . . . |
```

Task:4

1stPlayer is an invalid variable name because variable names cannot start with a number. It can be corrected to firstPlayer.

player_age is a valid variable name because it uses letters and an underscore.

\$score is invalid because the dollar sign (\$) is not allowed in standard C variable names; it can be changed to score.

total-marks is invalid because the hyphen (-) is treated as a minus operator in C; it can be corrected to totalMarks.

userName is a valid variable name because it starts with a letter and contains only letters.
