

Module 1: Session-2

Name: Siddheshwar Alure

Batch: 26May2026_Software_Sanket Chauhan

ANSWERS:

TASK 1:

Presentation Layer: Handles user interaction and displays information to users.

Application Layer: Processes data and implements application rules and logic.

Database Layer: Stores, retrieves, and manages data.

TASK 2:

Client: A device or application that requests information or services.

Server: A computer or system that provides information or services to clients.

Real life Example:

When you use a web browser to open Instagram Reels, your browser is the client, and Instagrams computers are the servers that send videos to you.

TASK 3:

Desktop Applications: Desktop applications must be installed on a computer before they can be used.

They are usually designed for a specific operating system such as windows, macos, or linux.

Web Applications: Web applications run directly in a web browser and do not require installation. They can be accessed from any device that has a compatible web browser and an internet connection.

Mobile Applications: Mobile applications are installed on smartphones or tablets. They are designed to run on mobile operating systems such as android or ios.

TASK 4:

MySQL: SQL database

Microsoft Access: SQL database

Oracle Database: SQL database
