

Module 1: Session-5

Name: Siddheshwar Alure

Batch: 26May2026_Software_Sanket Chauhan

ANSWERS:

TASK 1:

git init initializes a new Git repository.

git add . stages all files for commit.

git commit -m "Initial commit" saves the staged changes with the message "Initial commit".

git push origin main pushes local commits to the main branch of the remote repository.

git pull origin main retrieves and merges the latest changes from the remote main branch.

TASK 2:

git fetch downloads the latest changes from the remote repository but does not merge them into your local branch.

git pull downloads the latest changes and automatically merges them into your current local branch.

TASK 3:

https://github.com/Laazaarrus/26May_Siddheshwar_Python/blob/main/SE/Assignment/echo%20%23%2026May_Siddheshwar_Python%20%20RE.txt

TASK 4:

A Fork is a personal copy of someone else's repository that allows you to make changes independently.

A Pull is a request to merge your changes from a fork or branch into another repository or branch.

TASK 5:

git checkout -b feature-test

git add .

git commit -m "Added feature-test changes"

```
git checkout master  
git merge feature-test  
git branch -d feature-test
```
